

A777 SPIRAALBOOR HSS-CO, HD UITVOERING

DORMER

Kenmerken

- De A777 heavy duty spiraalboor met cilindrische schacht.
- Deze boor is bedoelt voor de moeilijker verspaanbare materialen, in het bijzonder voor titanium(legeringen).
- De boor heeft een sterke 135° tophoek en wordt vaak toegepast in Aerospace (luchtvaart/ruimtevaart) productie.
- De A777 kan zowel in handboormachines als machinaal worden ingezet.
- Uniek aan deze boor is het hoge percentage kobalt in het snelstaal (HSS).
- In soortgelijke boren wordt veelal 5% kobalt toegepast, maar de Dormer A777 is voorzien van maar liefst 8% kobalt.
- Daardoor is de boor beter bestand tegen warmteontwikkeling.
- Let op: dit is geen specifieke boor voor Roestvaststaal daarvoor kan beter de A108 of A147 gekozen worden.
- norm: DIN 338
- coating: Brons
- materiaal: HSS-E
- brons 4xD voor gelegeerd staal ≤ 1620 N/mm², nodulair gietijzer ≤ 1000 N/mm², titaanlegeringen ≤ 1250 N/mm² en nikkellegeringen ≤ 900 N/mm²

Varianten (151)
